

PROJECT NAME - MUSIC PLAYER

Prepared By - Vishwas Mehta
Submission Date - 17 April 2024
Roll No - 22f3001150
Email - 22f3001150@ds.study.iitm.ac.in

DESCRIPTION

This is a multi user Music Streaming App, which has all the functional requirements of Admin, Users and Creators. Anyone can use the app but only registered users will have additional features like creating playlists and uploading songs of their choice and uploading Albums as well. In the App the Admin has superior powers to blacklist songs/albums which don't adhere by the guidelines. Admin can also restrict creators from uploading songs if he finds anything suspicious about them.

TECHNOLOGIES USED

Flask - It is a python based micro framework that helps build lightweight apps. It is based on WSGI toolkit and jinja2 templating engine, that provides essential back-end components to build upon, such as routing, request handling and more.

HTML,CSS,Bootstrap - It provides a way to structure content on web page, we have used this to build our front-end design

Celery - It is a distributed task queue system for asynchronous task execution. Its primary used to handle tasks in web application where some operations can be deferred or executed asynchronously.

Redis - It is used as a message broker and a result backend in Celery tasks.

JWT tokens- It is compact and self contained way to transmit information between parties as a JSON object. Its used for authentication and authorisation in web applications.

Vue.js - It is progressive Javascript framework used for building user interfaces. Its often used in SPAs and it is known for its simplicity, versatility and performance

DATA BASE SCHEMA DESIGN

Users Table - It has names, emails, password, activity status, role and login time attributes.

Songs Table - It has song_ids, names, path, thumbnail, artist, lyrics, admin_permission, creator attributes

Albums Table - It has album_ids, names, artist, genre, admin_permission and creator attributes

Playlists Table - It has Playlist_ids, names, creator attributes

Album songs Table - It has songs_ids and album_ids attributes

Playlists songs Table - It has songs_ids and playlists_ids attributes

Ratings Table - It has rating_ids, song_id, rating, creator attributes
